

Lineage

A living record of how a family's wealth was built, and where it is going.

The challenge: Reimagining Online and Mobile Banking in Private Banking.

The intake is done for the bank, then it dies in a file.

- **The relationship manager comes first.** They want to be proactive, but admin eats the hours that belong to the client. They meet a client about four times a year, and each one has to count.
- **The client fills the forms once.** The data goes into a folder and never comes back to them as anything they can use.
- **Everyone sees the same eBanking.** It records transactions. It does not react to a person's life.
- **Advice sits in 80-page piles.** Screening checks hundreds of sources by hand, and most hits are false alarms.

THE IDEA

Turn dead intake into a living document the client co-owns.

- **From the same KYC data**, AI reads a person's direction, not a pile of transactions.
- **A team of AI agents does the bureaucracy** and routes every risk call to the right human.
- **Each call routes to the right desk**: wealth planner, tax, succession, or compliance.
- **The RM stays at the centre**. The work around them gets quieter.

WHAT IT IS

The same intake, two views.

FOR THE CLIENT

- **Wealth Journey.** How the family wealth was built, told as a story.
- **Wheel of Life.** Ten areas of life the client shapes themselves.
- **Life-Plan Feasibility.** Can I afford the studies and the house, travel as we want, and still retire at 65.
- **What's Next.** Move a priority, and the RM is quietly ready for it.

FOR THE RELATIONSHIP MANAGER

- **Trust Score and Action Points.** The state of each relationship at a glance.
- **Agent Verification Flow.** AI checks run, and a named person approves each item, with a full audit trail.
- **Approvals queue.** Confidence, reasoning, and the source behind every call.
- **Next-Conversation prep.** When a client's priorities move, you walk in ready.

One intake. The client sees their story. The RM sees what needs a decision.

WHY IT WINS

KYC became a living wealth story the client co-owns.

AI did the bureaucracy. A human owned every risk call.

1

Client-centric innovation.

The dead form becomes value the client can see and shape.

2

Experience and design.

One calm layout on web and mobile. Plain words, one decision per screen.

3

Technical feasibility.

A real multi-agent pipeline, an honest stack, and it deploys today.

4

Strategic impact.

Julius Baer looks modern, and the RM stays the heart of it.

Inside the lines that matter: no KYC or AML decision change, no IBANs or payments, a named human approves every call.
